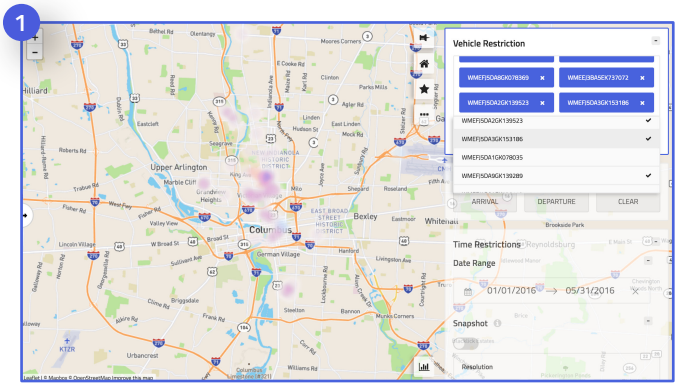
Crossroads: User Guide

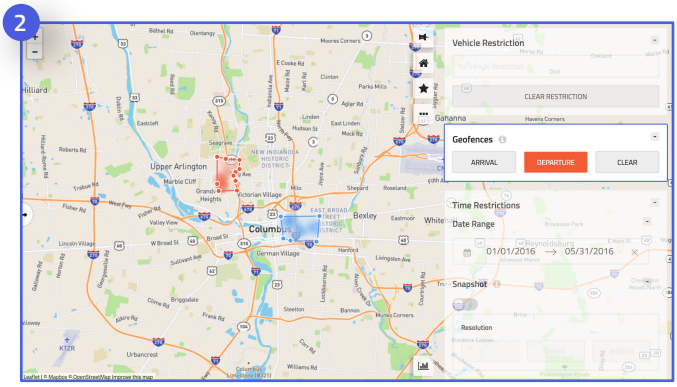
Dan Arters, Trey Hakanson, Arnab Nandi // The Ohio State University

1



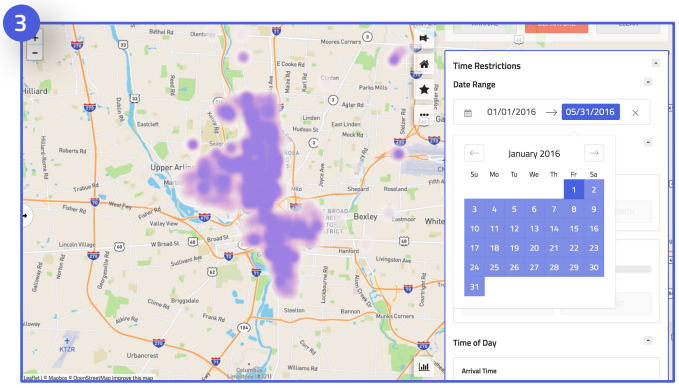
Vehicle Restrictions - Restrict which vehicles are included in queries

2



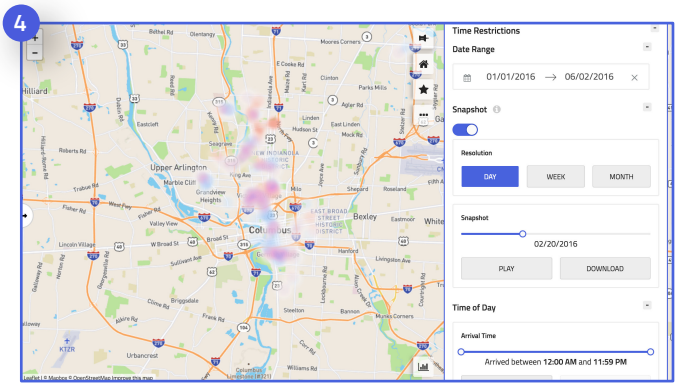
Geofences - Specify areas of departure and areas of arrival

3



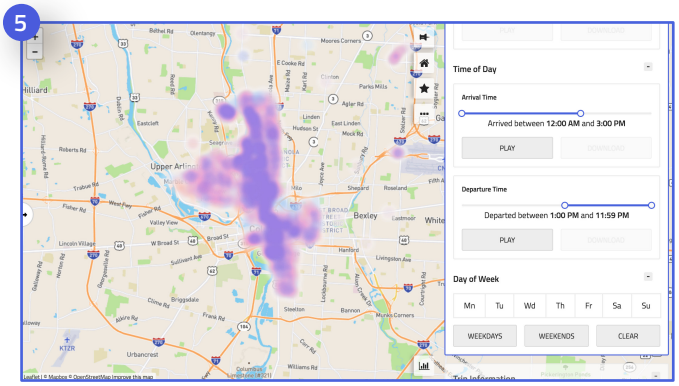
Date Range - Coarsely specify the range of time to be considered

4



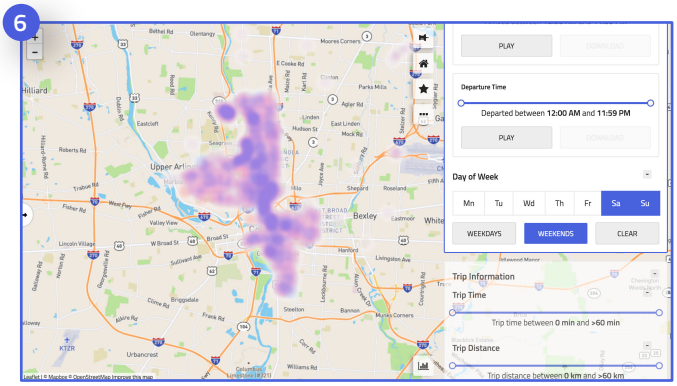
Snapshot - Explore times in the date range by the specified resolution: days, weeks, or months

5



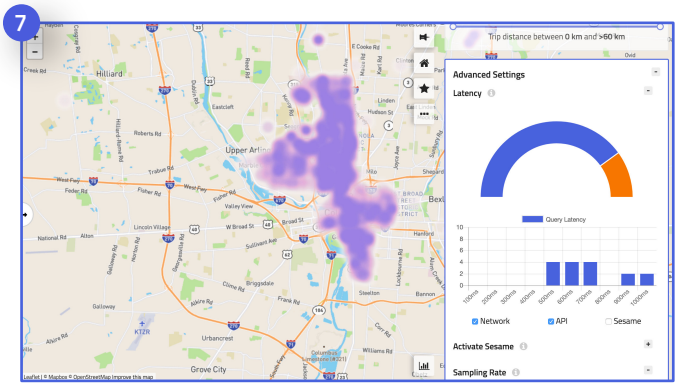
Time of Day - Specify what time of day to be considered for each day in the date range

6



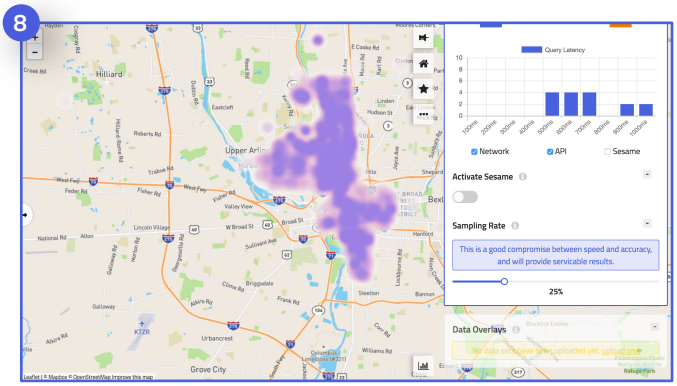
Day of Week - Specify the days of the week to be considered

7



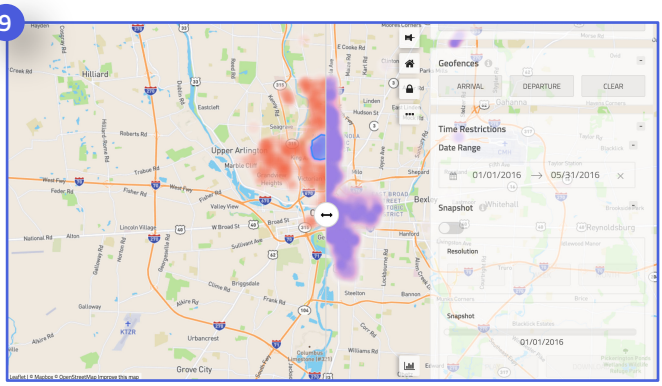
Latency Charts - Advanced feature to see the performance of queries made by the platform

8



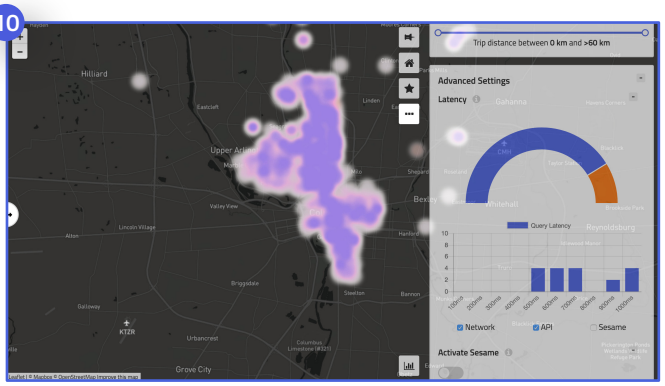
Sesame - Advanced configuration settings for sesame

9



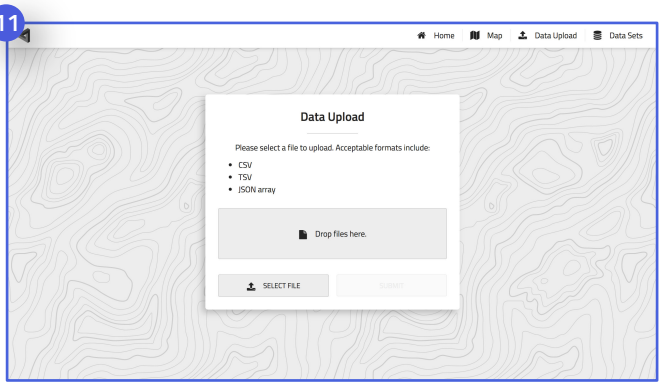
Side-by-Side - Compare two queries side by side by saving one, creating a new one, and sliding out the results of the previous for comparison

10



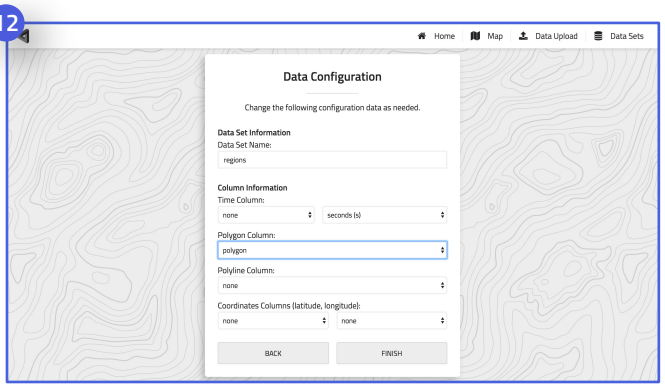
Additional Tilesets - Utilize additional tilesets to better visualize and or understand the results of the query

11



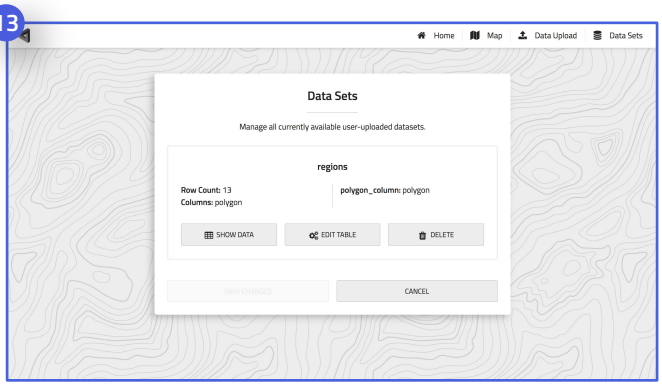
Dataset Upload - Upload a dataset to be overlaid over the core dataset

12



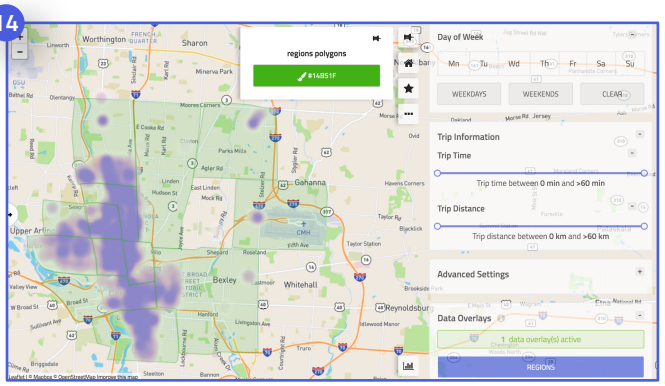
Dataset Configuration - Configure an upload dataset to specify what it means, which will change how it is displayed as an overlay

13



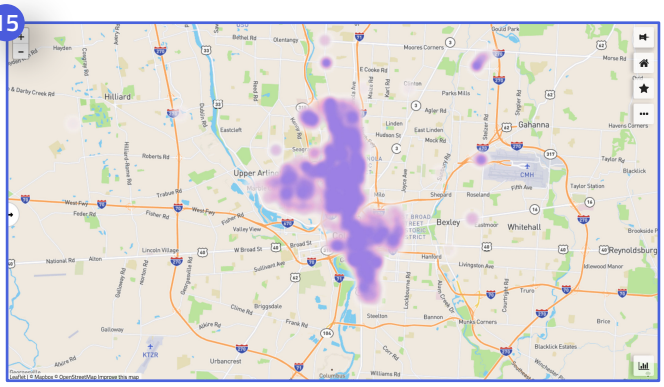
Dataset Explorer - Explore uploaded datasets and change their configurations

14



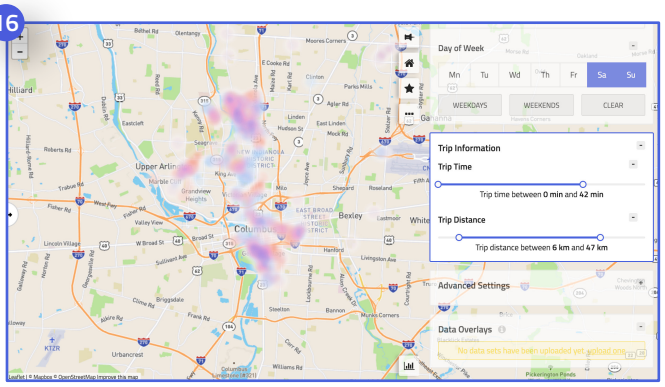
Overlays - Overlay the uploaded datasets over queries on the core data

15



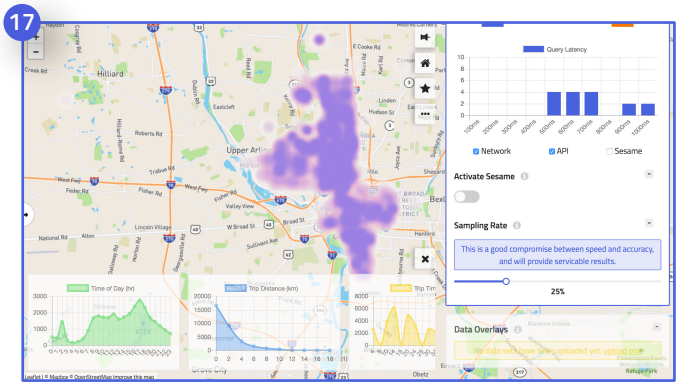
Collapsible Interface - Fully/partially collapsible the query pane for a better view of the results

16



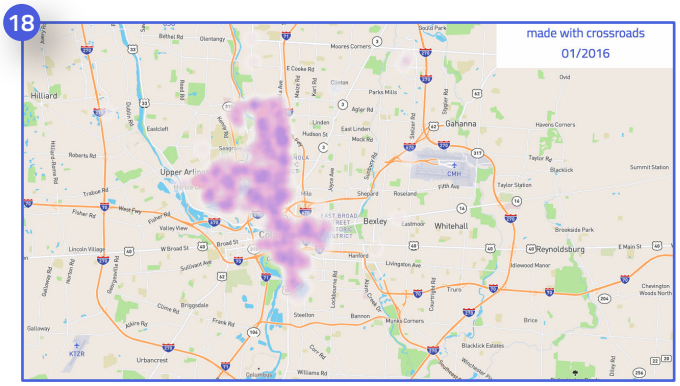
Trip Information - Additional constraints based on trip distance and duration

17



Aggregate Graphs - Provides aggregate information about all of the trips returned by a query

18



Animation Downloads - Downloadable animations for snapshots, time of day progressions, and more
